

NOVA M-225

HealthCo Easy To Use Chair Scale

HealthCo
LTD

Overview

Robust, reliable and long-lasting. But functions are easier to access, weight readings are clearer - and accuracy has doubled to 100g. Key features include:

- Class III Approved
- Mains operated or batteries
- Large, bright display
- Battery status indicator
- BMI/BSA calculation
- Hold/Tare
- Hinged armrests and footrests

Class III accuracy for medical purposes

100g accuracy makes the M-225 more than capable of assisting in medical diagnosis, as well as measuring weight for critical treatment, for example dialysis. A comfortable seat ensures stress-free weighing of patients that cannot stand.

Easier weighing of disabled patients

It's robust and easy to use - with a comfortable seat, brakes on two castors and hinged armrests and footrests.

Easy access features to save time

The indicator for the scale is a **brand new design**; the display is larger than previous models and features are easily accessible. Fewer buttons pressed means less time spent weighing.

A unique feature is the **Body Surface Area (BSA) calculator** - meaning, along with the M-225's BMI function, you can get a true picture of a patient's body health.

BSA is most commonly used to calculate drug dosages, and we believe this is a **world first for a weighing scale**.

9000 weigh-ins from one set of batteries

The chair can be powered from the mains, but for ultimate flexibility use 6x AA batteries. From full charge, these will last up to 180 hours - that's around 9000 weigh-ins.
